Join us for an unprecedented conversation about the opportunities and challenges of integrating Christian faith and science in theological education.

Offered from a distinctively Christian worldview and renewal perspective, the conference aims to provide a safe environment for possible dialogue between Christian faith, the natural sciences and theological education.

Topics include the history of science and religion, scientific theology and philosophy, methodology in science and theology, theological contributions to science and the impact of science on theology, exegetical matters in engaging faith and science, Christian education, pastoral ministry, Christian formation, Renewal studies, and other themes broadly related to the Holy Spirit, science, and theological education.
