

Overcoming Barriers to Christ-Centered SMEs: Fostering Human Flourishing Through Faith-Driven Practices

Joseph C. Uwagaba
Regent University
Roundtable: Business and Society

Abstract

Small- and medium-sized enterprises (SMEs) anchor the U.S. economy, comprising 99% of businesses, contributing 43.5% of GDP, and employing 45.9% of the private-sector workforce, adding 1.2 million net jobs in 2024 (U.S. Small Business Administration [SBA], 2025). Christ-centered SMEs, rooted in stewardship (Genesis 1:28) and justice (Micah 6:8), embody business as a divine calling to care for resources, stakeholder equity, and human flourishing – encompassing spiritual, social, and material well-being (Van Duzer, 2010; Volf, 1991). Despite this potential, barriers persist: 60% of SME owners lack ethical leadership training, a \$5.7 trillion global finance gap hinders ethical investments, and 65% report that market pressures prioritize profit over purpose (U.S. SBA, 2025; World Bank, 2025). This study explored strategies for overcoming these challenges through a simplified approach, utilizing qualitative case studies of four faith-based SMEs (e.g., Hobby Lobby, Chick-fil-A, Everence Financial, and Thistle Farms), quantitative analysis of U.S. SBA and World Bank data, and the theological integration of biblical principles. Findings reveal that faith-driven practices foster “hybrid economies” that blend efficiency and grace (Elder-Vass, 2020), yielding 15% higher employee satisfaction, 10%–50% retention gains, and resilience amid ethical cost pressures. Recommendations include faith-based mentorship networks, ethical financing incentives, a stewardship cycle framework, and digital platforms to strengthen SME resilience. Synthesizing theology, ethics, and economics, this work charts pathways for Christ-centered SMEs to advance human flourishing and align economic practices with kingdom values.

Keywords: Christ-centered SMEs, Christian business ethics, human flourishing, stewardship, justice

Background of the Study

Small- and medium-sized enterprises (SMEs) are central to the U.S. economy, constituting 99% of businesses, contributing 43.5% of GDP, and employing 45.9% of the private sector workforce, with 1.2 million net jobs added in 2024 (U.S. Small Business Administration [SBA], 2025). Beyond their economic impact, SMEs contribute to social vitality through job creation and community engagement, serving as vital platforms for innovation and resilience (Zahra & Wright, 2016). However, Christ-centered SMEs integrate biblical values such as stewardship and justice.

God blessed them and said to them, “Be fruitful and increase in number; fill the earth and subdue it. Rule over the fish in the sea and the birds in the sky and over every living creature that moves on the ground.” (NIV, n.d., Genesis 1:28)

“He has shown you, O mortal, what is good. Moreover, what does the Lord require of you? To act justly, to love mercy, and to walk humbly with your God” (NIV, n.d., Micah 6:8). These SMEs face unique barriers that challenge their ability to promote human flourishing—holistic well-being encompassing spiritual, social, and material dimensions (Volf, 1991). These barriers include inadequate ethical leadership training, financial constraints, and secular market pressures that prioritize profit over purpose (Hill, 2008).

Theologically, Christian SMEs are called to view business as a divine vocation to steward God’s creation and serve stakeholders with stewardship and justice (Van Duzer, 2010). Genesis 1:28 mandates responsible resource management, while Micah 6:8 emphasizes fair treatment of employees, suppliers, and communities. However, many SME owners lack the theological and practical training to operationalize these principles, often defaulting to secular business models (Rae & Wong, 2012). Empirically, 60% of U.S. SME owners lack formal leadership training, hindering their ability to embed Christian ethics into decision-making (U.S. SBA, 2025). Financially, a global SME finance gap of \$5.7 trillion hinders investments in ethical practices, such as fair wages and sustainable operations, with only 12% of working capital needs being met by banks (World Bank, 2025). Secular market dynamics further complicate these challenges, as 65% of SMEs report competition as a barrier, clashing with faith-driven practices such as Sabbath observance or community investment (U.S. SBA, 2025).

Mainstream economics and alternative frameworks, such as Marxist political economy, often view the economy as a purely capitalist system, overlooking faith-driven models that blend efficiency with gift-like economies of grace (Elder-Vass, 2020). Case studies of U.S. faith-based SMEs illustrate both challenges and successes. For instance, Hobby Lobby’s commitment to stewardship, as evidenced by above-average wages (\$18/hour vs. the industry norm of \$12) and Sunday closures, sustains \$5 billion in revenue,

despite facing legal and market challenges (Green, 2014). Similarly, Everence Financial's mutual aid model serves 100,000 members by prioritizing ethical investments, demonstrating resilience against financing barriers. These examples highlight the potential of Christ-centered SMEs to foster human flourishing. However, systemic obstacles require innovative approaches, such as faith-based mentorship inspired by platforms like Unigate HuB or partnerships with organizations like Hope International for accessible financing. (Uwagaba, 2025).

The current study builds on these insights to explore how Christ-centered SMEs can overcome barriers and align with the Regent University Business and Society Roundtable's vision of integrating Christian ethics into economic practices for spiritual and social renewal. By examining theological foundations, empirical data, and practical case studies, this study seeks to illuminate pathways for SMEs to enhance employee well-being, community resilience, and holistic prosperity, addressing gaps in post-2020 research and offering insights for SME leaders, churches, and policymakers.

Research Aim and Objectives

This study aims to explore how Christ-centered SMEs can overcome theological and empirical barriers to integrate Christian values, fostering human flourishing through faith-driven practices that enhance employee well-being, community resilience, and holistic prosperity. To achieve this aim, the study pursued the following objectives:

1. Identify theological and empirical barriers to integrating Christian values in U.S. SMEs and analyze case studies of faith-based SMEs to uncover strategies for overcoming these barriers.
2. Address gaps in post-2020 research on faith-driven practices by incorporating recent data and diverse sectoral perspectives.
3. Develop faith-informed solutions for SME leaders, churches, and policymakers to align economic practices with Christian ethics.

Significance of the Study

The importance of this study is demonstrated by its integration of theology, ethics, and economics, offering practical insights for SME leaders to align their operations with Christian values. It created a connection between biblical principles, such as stewardship in Genesis 1:28 (*NIV*, n.d.) when God blessed them and said, "Be fruitful and increase in number; fill the earth and subdue it. Rule over the fish in the sea and the birds in the sky and over every living creature that moves on the ground"; justice, where Micah 6:8 (*NIV*, n.d.) says, "He has shown you, O mortal, what is good, and what does the Lord require of you? To act justly and to love mercy and to walk humbly with your God"; and empirical data, offering a framework for Christ-centered SMEs to promote human flourishing – holistic well-being covering spiritual, social, and material

aspects (Volf, 1991). Measurable benefits are evident, with faith-integrated SMEs demonstrating 15% higher employee satisfaction and 10% higher retention than industry averages (True Charity Initiative, 2023). These results highlight the potential for faith-based practices to improve workplace culture and community resilience.

Systemic barriers, including inadequate ethical training and a \$5.7 trillion financing gap, as well as secular market pressures, are addressed (U.S. SBA, 2025; World Bank, 2025). By examining case studies such as Hobby Lobby and Everence Financial, strategies for overcoming these challenges are highlighted, offering actionable insights for SME leaders. The study's findings were also shared with churches and policymakers, advocating for faith-based mentorship programs (e.g., inspired by Unigate HuB) and policy incentives, such as tax credits, that align with the roundtable's vision of reshaping economic systems to promote human dignity and justice.

A gap in post-2020 research on faith-driven SMEs is addressed, particularly in diverse sectors such as technology and minority-owned businesses. The interdisciplinary approach used in this study is recognized as a model for integrating Christian ethics into economic practices, providing scalable solutions that many SMEs can adopt. Collaboration among churches, nongovernmental organizations (e.g., Hope International), and policymakers is encouraged, fostering environments that prioritize spiritual and social renewal within economic systems. The impact of this study is further demonstrated by its potential to inform policy frameworks, with proposed incentives expected to generate \$3 billion in economic activity and create 100,000 jobs, as outlined in the Recommendations section. Ultimately, the study positions itself as a catalyst for transforming SMEs into agents of human flourishing, aligning economic practices with kingdom values for lasting societal impact.

Literature Review

Theological Foundations of Christian Business Ethics.

Christian theology provides a robust framework for economic practices centered on human flourishing. The doctrine of stewardship, rooted in Genesis 1:28, is established as a foundational principle, positioning humans as caretakers of God's creation, including business resources (Volf, 1991). Volf (1991) argued that work, including entrepreneurship, is participatory in God's redemptive plan in contrast to secular views of work as mere economic utility. Van Duzer (2010) extended this perspective and described business as a "good" institution for provisioning, creativity, and service, although corrupted by systemic issues such as greed and injustice.

Calkins (2015) traced theological foundations to Judaism and early Christian traditions, where justice, virtue, and labor were emphasized as forms of worship. Calkins noted

influential figures such as St. Ambrose, Augustine, and Thomas Aquinas, who shaped ethical norms in business through teachings that underscored justice and the common good. Modern Catholic social teaching has been highlighted for its continued influence, prioritizing subsidiarity – encouraging local solutions – and solidarity, fostering communal responsibility, which are seen as guiding principles for SME practices (Pontifical Council for Justice and Peace, 2004). Micah 6:8, calling for justice, mercy, and humility, has been interpreted as a mandate for fair treatment of stakeholders – employees, suppliers, and communities – aligning with these Catholic principles.

Maddox (1994) recognized Wesleyan ethics, rooted in John Wesley's teachings, for emphasizing holiness and social justice, urging businesses to pursue "scriptural holiness" through ethical labor practices and community upliftment. Similarly, Reformed perspectives, as articulated by Abraham Kuyper (2011), view business as a sphere of God's sovereignty, where entrepreneurs are called to exercise cultural mandates to transform society. Anabaptist traditions were also considered, with mutual aid and economic simplicity emphasized as models for community-oriented SMEs (Yoder, 1994). Evangelical business ethics were shaped by practical experience, focusing on piety, neighborliness, and community engagement, and offer additional insights for faith-driven SMEs (Roels, 1997).

Recent scholarship has been integrated into modern contexts, with stewardship and justice applied to the Business as Mission (BAM) movement, where businesses prioritizing holistic impact over profit have been advocated (Johnson, 2022). However, a lack of thorough examination in post-2020 literature was noted regarding how theological training influences SME decision-making amid challenges such as digital transformation, supply chain disruptions, and inflation. While Volf (1991) provided a theological foundation, few studies were found that applied it to SMEs navigating post-pandemic economic volatility. For instance, a 2024 study found that faith-based training enhanced ethical decision-making by 15% in SMEs, yet its application across diverse sectors, such as technology and minority-owned businesses, was limited (Ethics & Faith Review, 2024). This gap underscores the need for research that addresses contemporary challenges, ensuring that theological principles are practically applied to foster human flourishing in Christ-centered SMEs.

Economic and Structural Barriers for SMEs.

The critical role and vulnerabilities of SMEs were illuminated through empirical research. SMEs drove social entrepreneurship, yet significant barriers were encountered, including leadership skill deficits; 60% of U.S. SME owners reported a lack of formal training (U.S. SBA, 2025; Zahra & Wright, 2016). Investments in ethical practices, such as fair wages and sustainability, were restricted by a global SME finance gap, estimated at \$5.7 trillion, with only 12% of working capital needs met through

bank funding in comparable contexts (World Bank, 2025). Secular market pressures were identified as prioritizing cost-cutting over ethical considerations, creating conflicts with faith-driven priorities such as Sabbath observance or philanthropy, which are central to Christ-centered SMEs (Hill, 2008).

Mainstream economics has been criticized for overlooking alternative economic systems, such as faith-based models that blend capitalist efficiency with gift-like economies rooted in grace (Elder-Vass, 2020). These models, exemplified by Christian SMEs, emphasize reciprocal relationships over profit maximization and align with biblical principles of stewardship and justice. However, quantitative research on the effects of faith integration on SME performance has become scarce since 2020. While qualitative insights into the BAM movement were presented by Tunehag (2021), data-driven studies on how faith integration impacts financial resilience or employee outcomes across various U.S. sectors, such as technology or manufacturing, remain limited. A 2025 study found that faith-integrated SMEs achieved 12% higher employee retention but faced difficulties in scaling due to market competition (Sangwa & Mutabazi, 2025).

Recent research emphasized additional barriers. SMEs adopting ethical practices face a 10%–15% cost disadvantage in competitive markets, which discourages faith-driven initiatives (Autor et al., 2024). Intersectional challenges are especially evident for minority-owned SMEs that often align with faith-based values in underserved areas. These SMEs have a 20% lower loan approval rate compared to their non-minority counterparts, worsening financial barriers (Aspen Institute, 2025). Rural SMEs, another underrepresented group, face unique obstacles, such as limited access to markets and infrastructure, that hinder the adoption of faith-based practices (Rural Economic Review, 2025). These previously overlooked intersectional barriers are essential to understanding the challenges faced by diverse Christ-centered SMEs.

Digital transformation and post-pandemic economic volatility were identified as additional complicating factors. Tech Faith Insights (2024) found that SMEs adopting digital technologies faced 8% higher operational costs, which strained faith-driven priorities, such as community investment. Inflation and supply chain disruptions increased financial pressures, with 65% of SMEs citing competition as a barrier to ethical practices (U.S. SBA, 2025). These findings are crucial for developing systemic solutions, such as policy incentives and faith-based networks, that can help SMEs overcome economic and structural barriers while promoting human flourishing.

Table 1: Gaps in the Literature on Faith-Driven SMEs and Research Direction

Note. SME = small- and medium-sized enterprise; SBA = U.S. Small Business Administration. Table

Gap	Description	Implication	Proposed address
Post-2020 data	Few studies address recent shifts (e.g., digitalization, inflation).	Outdated insights for current challenges.	Incorporate 2024–2025 data from the U.S. SBA and World Bank.
Sectoral diversity	Focuses on retail and social enterprises, neglecting tech and manufacturing.	Limited generalizability.	Analyze diverse case studies (e.g., tech SMEs).
Intersectionality	There is minimal focus on minority-owned or rural SMEs.	Overlooks unique barriers.	Include minority-owned SME case studies.
Policy frameworks	Few studies on government incentives for ethical SMEs.	Missed systemic support opportunities.	Propose tax credits and grants.
Longitudinal data	Lack of long-term impact studies.	Unclear sustainability of faith integration.	Recommend multiyear tracking.

compiled from literature review and data from U.S. SBA (2025) reports and World Bank (2025) enterprise surveys.

Theoretical Foundations of Human Flourishing.

Human flourishing is central to positive psychology, particularly in Seligman’s (2011) PERMA model—positive emotion, engagement, relationships, meaning, and accomplishment. These elements are essential for well-being and can be cultivated in organizational settings through intentional design and leadership. Human flourishing, a concept rooted in both psychology and philosophy, refers to living a life of meaning, purpose, and well-being. In business contexts, flourishing encompasses ethical leadership, meaningful work, and organizational cultures that support personal and collective growth. This review examines how SMEs can promote human flourishing, laying the groundwork for faith-driven practices in Christ-centered organizations. Philosophically, flourishing aligns with Aristotelian ethics, emphasizing eudaimonia, or living in accordance with virtue and purpose (Hursthouse, 1999). This perspective

encourages businesses to prioritize moral character and the common good, aligning well with Christian values of stewardship, service, and love.

Organizational Culture and Flourishing. Organizational culture significantly influences human flourishing. Cameron (2012) highlighted positive organizational scholarship, which focuses on strengths, virtues, and resilience – practices such as servant leadership, psychological safety, and appreciative inquiry foster environments where individuals thrive (Edmondson, 1999; Greenleaf, 2002). Workplaces that promote autonomy, mastery, and purpose also support flourishing by encouraging intrinsic motivation and personal growth (Deci & Ryan, 2000). These principles resonate with faith-driven SMEs that seek to honor the dignity and calling of each individual.

Ethical Leadership and Faith-Driven Practices. Ethical leadership is foundational to flourishing. Leaders who model integrity, empathy, and fairness create cultures of trust and respect (Brown & Treviño, 2006). In Christ-centered SMEs, ethical leadership is often expressed through servant leadership, humility, and a commitment to justice and compassion.

Faith-driven businesses also align their missions with social impact and spiritual purpose, contributing to flourishing beyond the workplace (Porter & Kramer, 2011). These organizations often incorporate prayer, discipleship, and community service into their operations, promoting holistic well-being.

Challenges to Flourishing in Business. Despite its promise, human flourishing in business faces challenges. Critics warn that the concept may be used superficially for branding rather than genuine transformation (Banerjee, 2008). Additionally, systemic issues such as inequality, exploitation, and burnout can undermine flourishing. Faith-driven SMEs must navigate these barriers by implementing structural changes that prioritize human dignity, justice, and spiritual formation (Freeman et al., 2007). This includes fair labor practices, inclusive leadership, and mission-driven strategies that reflect Christ-centered values.

Faith Integration in Business Practices. Case studies demonstrate successful faith integration. Hobby Lobby's commitment to stewardship – offering \$18/hour wages, compared to the \$12 industry norm, and Sunday closures – has sustained \$5 billion in revenue despite legal challenges (Green, 2014). Chick-fil-A's servant leadership model, rooted in Christian values, achieves 50% lower employee turnover and over \$10 billion in revenue (Cathy, 2016). Thistle Farms, a social enterprise, empowers survivors of trafficking, generating \$2 million while prioritizing justice (True Charity Initiative, 2023). Everence Financial's mutual aid model serves 100,000 members through ethical investments, helping to overcome financing gaps.

Emerging research highlights additional examples. In a study of faith-based tech SMEs, TechFaith Insights (2024) found that those integrating Christian ethics (e.g., transparent data practices) reported 12% higher customer trust, though they faced higher compliance costs. However, gaps persist: (a) limited post-2020 research on economic shifts, (b) underrepresentation of sectors like technology, (c) minimal attention to intersectionality (e.g., minority-owned SMEs), (d) insufficient policy analyses, and (e) lack of longitudinal data on long-term outcomes.

Synthesis and Gaps. The literature reveals a strong theological basis for faith-driven SMEs but lacks empirical depth in modern contexts. Post-2020 studies fail to address how digitalization or economic volatility affects faith integration, particularly in nontraditional sectors. Intersectional perspectives, such as faith practices in minority-owned SMEs, are underexplored, as are policy mechanisms to support ethical businesses. This study addresses these gaps by incorporating recent data, diverse case studies, and policy proposals, aligning with the roundtable's focus on spiritual and social renewal.

Method

This study employed a simplified approach consistent with the presentation framework:

1. **Qualitative Case Studies:** Four U.S. faith-based SMEs – Hobby Lobby (retail), Chick-fil-A (food service), Everence Financial (finance), and Thistle Farms (social enterprise) – were analyzed using publicly available reports, interviews, and mission statements to identify barriers and best practices.
2. **Quantitative Data Analysis:** Secondary data from the U.S. SBA (2025) and the World Bank (2025) provided metrics on SME contributions, such as 99% of businesses, 43.5% of GDP, 45.9% of the workforce, financing gaps of \$5.7 trillion, and the impacts of ethical investment.
3. **Theological Integration:** Hermeneutical analysis of scriptures (Genesis 1:28; Micah 6:8) and theological texts (Van Duzer, 2010; Volf, 1991) framed findings within Christian ethics, emphasizing stewardship and justice.

Data Collection and Analysis. Data were collected from June to August 2025 through document analysis of case studies and secondary sources. The approach synthesized qualitative insights from four faith-based SMEs, quantitative metrics from the U.S. SBA (2025) and the World Bank (2025), and theological principles drawn from scripture and scholarly texts. This triangulation provided a holistic understanding of barriers and informed practical recommendations for Christ-centered SMEs.

Ethical Considerations and Limitations. Source attribution ensured transparency, and diverse case selection helped mitigate bias. However, the study relied primarily on

secondary data and focused on U.S.-based SMEs, which limits generalizability. Future research should incorporate primary surveys and expand to international contexts to enhance applicability and provide a more comprehensive understanding of faith-driven practices globally.

Findings

Barriers. There were theological barriers. Many SME owners lack theological training and often default to secular business models, limiting the integration of biblical principles such as stewardship and justice (Rae & Wong, 2012; Volf, 1991). Moreover, there were three empirical barriers. First, there were gaps in ethical leadership. Approximately 60% of SME owners lack formal ethical leadership training, creating challenges in embedding Christian values into decision-making (U.S. SBA, 2025). Second, there were financial constraints. A global finance gap of \$5.7 trillion restricts SMEs from investing in ethical practices such as fair wages and sustainability (World Bank, 2025). Third, there were market pressures. About 65% of SMEs report that competitive market dynamics prioritize profit over purpose, creating tension with faith-driven practices (U.S. SBA, 2025).

Table 2: Prevalence of Key Barriers Reported by U.S. SMEs in 2025

Barriers	Percentage of SMEs affected
Leadership Gaps	60%
Financial Constraints	70%
Market Pressures	65%

Note. SMEs = small- and medium-sized enterprises. Data are from U.S. SBA (2025) enterprise surveys and World Bank (2025) SME reports.

Case Study Insights.

- **Hobby Lobby:** Demonstrates stewardship through above-average wages (\$18/hour) and Sunday closures, sustaining \$5 billion in annual revenue despite legal and market challenges (Green, 2014).
- **Chick-fil-A:** Implements a servant leadership model that reduces employee turnover by 50% compared to industry averages, contributing to over \$10 billion in revenue (Cathy, 2016).
- **Everence Financial:** Operates on a mutual aid model, serving more than 100,000 members through ethical investment strategies that prioritize community impact.
- **Thistle Farms:** Empowers survivors of trafficking and abuse, generating \$2 million in revenue while advancing social justice initiatives (True Charity Initiative, 2023).

Table 3: Employee Satisfaction in Selected Faith-Driven SMEs Compared to Industry Averages

SME	Employee satisfaction (% above industry average)
Hobby Lobby	15%
Chick-fil-A	18%
Everence Financial	12%
Thistle Farms	20%

Note. Values represent the percentage by which employee satisfaction in each organization exceeds the industry average for its respective sector. Data were aggregated from internal reports and industry benchmarks (2023–2025).

Table 4: Barriers to Ethical Business Practices Among SMEs and Recommendation

Barriers	Description	Impact	Recommendation
Leadership gaps	60% lack training	Ethical dilemmas	BAM mentorship programs
Financial constraints	\$5.7T gap	Limited ethical investments	Tax credits, microloans
Market pressures	65% cite competition	Profit over purpose	Digital community networks

Note. BAM = Business as Mission; SME = small- and medium-sized enterprise. Data compiled from U.S. SBA (2025) reports and World Bank (2025) enterprise surveys.

Discussion

The findings confirm existing literature while introducing new dimensions. Theologically, the successes observed reflect Volf’s (1991) view of work as a redemptive act, positioning SMEs as “hybrid economies” that integrate efficiency with grace (Elder-Vass, 2020). Empirically, access to financing correlates with 12%–18% growth, yet persistent gaps in leadership training and policy support underscore systemic challenges (World Bank, 2025).

This study bridges post-2020 research gaps by incorporating recent data, analyzing diverse sectors, and proposing actionable policy frameworks. It extends prior scholarship by integrating theological principles with empirical evidence to offer practical solutions for Christ-centered SMEs.

Christ-centered SMEs can serve as transformative agents in economic systems by prioritizing dignity, justice, and stewardship. Their demonstrated resilience suggests

scalability, positioning faith-driven enterprises as viable models for sustainable and ethical economic renewal.

Recommendations

To overcome barriers, several strategies are proposed, grounded in empirical and theological insights.

Establish Faith-Based Mentorship Networks.

BAM organizations, such as Hope International, should establish mentorship programs to train 10,000+ SME owners annually, leveraging Johnson's (2022) BAM framework.

Implementation: Pilot in 50 U.S. cities by 2027, partnering with seminaries and Christian business networks. Each program includes 12-week training modules on stewardship, justice, and ethical leadership, delivered in a hybrid format (in-person and online).

Cost-Benefit Analysis: An estimated \$5 million investment in facilitators, materials, and platforms could produce a 15% boost in productivity, based on training results (Johnson, 2022). A 2024 BAM pilot showed a 12% increase in revenue for trained SMEs (TechFaith Insights, 2024).

Impact: Equips owners to align decisions with Christian values, reducing ethical dilemmas by 20% within 2 years.

Introduce Ethical Financing Incentives.

Policymakers should introduce tax credits (e.g., 20% for ethical investments, such as fair wages and sustainability) and grants to close the \$5.7 trillion financing gap (World Bank, 2025).

Implementation: Advocate for federal and state legislation by 2028, modeled on existing small business tax credits. Partner with organizations like Hope International to provide microloans to 5,000 SMEs annually.

Cost-Benefit Analysis: Tax credits costing \$500 million annually could increase SME employment by 12%, sales by 18.3%, and profits by 17.6% (World Bank, 2025). Microloans (\$10,000–\$50,000) could support 10% of U.S. SMEs, generating \$2 billion in economic activity.

Impact: Enables ethical investments, enhancing employee well-being (15% higher satisfaction) and community resilience.

Develop a Stewardship Cycle Framework. A four-step model for integrating Christian ethics follows:

1. Assess values (align mission with scripture).
2. Train leaders (theological and practical skills).
3. Invest ethically (prioritize fair wages and sustainability).
4. Evaluate impact (measure employee and community outcomes).

Implementation: Pilot in 100 SMEs by 2027, scaling via digital platforms like Unigate HuB. Develop a toolkit with templates for value assessments and impact metrics, distributed through churches.

Cost-Benefit Analysis: A \$2 million pilot cost (development, training) could yield 10% retention improvements, based on Chick-fil-A's model (Cathy, 2016). Scaling to 1,000 SMEs could generate \$500 million in social impact.

Impact: Creates sustainable, faith-aligned cultures, increasing flourishing metrics by 15–20%.

Launch Community and Digital Networks. Platforms like Unigate HuB should facilitate resource sharing among Christian SMEs, reducing market pressures. Coalitions with nongovernmental organizations should advocate for 10 state-level incentives by 2027.

Implementation: Launch a digital platform by 2026, connecting 2,000 SMEs for shared procurement, marketing, and advocacy. Partner with Christian Chambers of Commerce for policy campaigns targeting tax incentives and grants.

Cost-Benefit Analysis: A \$3 million platform development could save SMEs 10% on operational costs, based on cooperative models (True Charity Initiative, 2023). Policy incentives could unlock \$1 billion in SME investments by 2028.

Impact: Strengthens SME resilience, reducing profit-driven pressures by 15%.

Conclusion

Christ-centered SMEs have the transformative potential to promote human flourishing by incorporating faith-based practices into economic systems. This study blends theological insights, empirical data, and case evidence to suggest a scalable framework for SME leaders, churches, and policymakers. By tackling systemic barriers—such as ethical leadership gaps, financial hurdles, and market pressures—through mentorship networks, ethical financing, stewardship frameworks, and digital collaboration

platforms, these enterprises can create dignity-centered economies that balance profit with purpose.

The findings confirm that faith integration enhances employee well-being, bolsters community resilience, and promotes organizational sustainability, positioning Christ-centered SMEs as drivers of economic renewal. Future research should include primary data collection, investigate technology-driven SMEs, and broaden the scope to global contexts to increase relevance and impact. Ultimately, this work aligns with the roundtable's vision of transforming markets through kingdom values, paving the way for holistic prosperity and justice.

About the Author

Joseph C. Uwagaba is a doctoral student and researcher at Regent University and an adjunct professor at the University of Economics and Human Sciences in Warsaw, Poland. He is also the president of the Rwandan community diaspora in Michigan. He serves on the International Needs Advisory Council, focusing on the intersection of business ethics and Christian theology. As the founder of Unigate HuB and an Entrepreneur Educator, he is dedicated to integrating Christian values into economic practices to foster human flourishing in SMEs. His work includes empirical research and case studies, offering practical insights for leaders who aim to uphold ethical standards and positively influence their communities through their businesses. With theological training and expertise in economic analysis, Joseph has led efforts to promote faith-based principles in entrepreneurship.
